For more information see page 61.

MasterTIG torches are the highest quality TIG torches available on the market as they include the most cutting-edge designs created by CK Worldwide. These torches were specifically designed to be smaller, lighter, and more compact than our standard line while providing technical advantages that can't be matched.

Look for these exclusive MasterTIG developed TIG technologies throughout this catalog. Each has been developed to maximize efficiencies and performance in TIG applications.

### FLEX-LOC™ TORCHES *CK EXCLUSIVE*

Designed to allow ergonomic access to hard-to-reach welds and help prevent carpal tunnel syndrome, these 360-degree variable angle torch heads lock in any position.

### *CK EXCLUSIVE* TRIM-LINE™ TORCHES

Trim-Line™ torches were designed to reduce the size and weight of standard 3 Series torches allowing for better maneuverability and comfort when TIG welding. They feature a smaller handle size, and machine side fittings, so that you can use the same amperage as your standard torch while retaining the mobility of a smaller torch such as a 9 or 20.

### WEDGE COLLET *CK EXCLUSIVE*

Lasts 10 times longer than standard split collets. Improves arc starts and arc stability. Fits any standard collet body or gas lens, see pages 30-31 and 58.

### *CK EXCLUSIVE* SUPER CUPS

For high-amperage and high-reflective heat applications, Super Cups minimize cracking, saving time and money. Available to fit all 2 and 3 Series torches, see pages 64-65.

### SUPER-FLEX™ CABLES *CK EXCLUSIVE*

Innovative design replaces heavy, stiff cables to increase range of motion, reducing fatigue and improving productivity. Available for all gas-cooled and water-cooled torches, see pages 49-55.

# MICRO TORCH

The Micro Torch is the smallest and most versatile TIG torch on the market! With three angular heads this torch allows multiple options for narrow applications where precision is needed and space is limited. This torch package comes complete with an AK-MR accessory kit and tungsten stick-out gauge.

# LARGE DIAMETER GAS SAVER™ KITS

Alloys such as Titanium that require extra shield gas coverage are now being used for aerospace and motorsport components. Standard and large diameter gas lenses are not adequate to insure a larger surface area of shield gas coverage. CK Worldwide's Large Diameter Gas Saver™ is ideal for titanium tubing. High-temperature clear glass gas cups insure full visibility of the weld puddle and directs a uniform gas flow pattern over a very large surface area.

Aerospace and motorsport components present odd angles that need to be welded. Standard tungsten stick-out beyond the gas cup does not allow the torch to be put in the proper position to weld those angles. The Large Diameter Gas Saver™ allows the tungsten to extend up to 1-1/2" (3.81cm) beyond the edge of the gas cup giving the welder the ability to access the weld without getting the torch into the angle.

**GREAT FOR TITANIUM!**

- Improved visibility allows odd-angle welding
- Tungsten stick-out can extend up to 1-1/2" (3.81cm) beyond the edge of the gas cup
- Clear or Alumina push on nozzles available
- Less expensive replacement parts than standard gas lenses
- Fits most standard silicone rubber insulated torch bodies
- Replaceable screen adapter

# COLD WIRE FEEDER

Automate the addition of filler metal with the touch of a button using the WF-5 Cold Wire Feeder. This machine works independently to provide continuous filler metal for your TIG welding needs.

- Increases productivity
- Automates adding of filler metal
- All parameters can be duplicated for consistency
- Dual groove drive roll accepts multiple wire sizes
- Accepts standard wire spool sizes
- Eliminates filler rod stub loss
- Machine cover keeps filler metal clean and uncontaminated
- Makes fully-automated, or one-handed, TIG welding possible

*Note: For complete installation of a Cold Wire Feed system you need both the Cold Wire Feeder and a Wire Feed Application method, such as those listed below, in conjunction with your welding machine. The Cold Wire Feeder works independently and needs its own power source.*

# ROTARY AMPERAGE CONTROL

Remote amperage controls provide welding power source contactor on-off, activate gas and/or water solenoids, and provide full range current output control. Handle styles include hook and loop straps where one size fits all handle diameters and retrofits easily on all makes of torches or built into the handle as original equipment. A built in strain-relief prevents the control cord from being pulled out or damaged.

- Replace foot pedal amperage controls with fingertip operated amperage controls
- Hook and loop strap allows amperage control to quickly mount on any TIG torch or Stick electrode holder
- Amperage controls available as a complete handle assembly
- Fits most popular TIG machines
- Custom lengths available up to 200 ft. (61m)

# LINEAR AMPERAGE CONTROL

The Amptrak™ remote current control provides remote on-off control of the welding power source contactor and/or gas and water solenoid control, as well as full range remote current output control. A built in strain-relief prevents the control cord from being pulled out or damaged. The Amptrak™ remote current control can be ordered either built into a CK torch handle as original equipment or in the hook and loop model where one size fits all.

- Linear slide actuator for complete ON/OFF and full amperage control
- Built in handle or hook and loop strap design to fit all TIG torches
- Adapts to most standard TIG power sources
- Protected against high frequency

# WHEEL AMPERAGE CONTROL

Remote amperage controls provide welding power source contactor ON/OFF, activate gas and/or water solenoids, and provide full range current output control. Handle style includes hook and loop straps where one size fits all handle diameters and retrofits easily on all makes of TIG torches.

- Returns to off automatically
- Insures electrode not "hot" when not in use
- Great for tack welding, short or long welds, and "bumping" technique
- Can be positioned closer to torch head for optimum torch control

### SW2

#### LOCKING SWITCH COMPONENTS

#### TO REPLACE **SW2** ELECTRIC SWITCH:

1. Carefully solder the control wires to the switch leads and insulate the connection with heat shrink tubing or tape. Make sure that final diameter is not too great to fit inside the control wire housing.
2. For best results, ease the switch into the rear part of the handle cavity first (a small screwdriver is useful in easing the lead wires into the cavity). Then, gently push the switch forward and down into the proper position and secure it with the switch screws.
3. Secure the control wire with the nylon set screw at the rear of the handle.

### SW3

#### MOMENTARY SWITCH COMPONENTS

#### TO REPLACE **SW4** PLUG-IN SWITCH:

1. Remove the nylon switch cover screws, switch cover and switch button.
2. Unplug the inoperative micro switch and plug in a new micro switch.
3. Re-assemble the switch and switch cover over the new micro switch and secure the cover to the handle with the nylon switch screws.

CAUTION: DO NOT OVERTIGHTEN THE NYLON SCREWS.

# CUSTOM-SIZED | PATENTED CK EXCLUSIVE PURGE CHAMBER

The patented CK Flexible Purge Chamber is used in the Tungsten Inert Gas (TIG) process to provide a completely inert atmosphere for the welding of reactive metals such as titanium, molybdenum, nickel-based and aluminum-based alloys, as well as non-reactive metals like stainless steel. Unique to this design is the ability to draw a vacuum around the product to be welded by collapsing the chamber. The chamber is then filled through a perforated hose that encircles the bottom of the chamber allowing the argon gas to expel all atmospheric gases more effectively through the top valve port. This significantly reduces the time required to reach an inert atmosphere suitable for welding, while using considerably less gas than traditional rigid purge chambers.

# TUNGSTEN ELECTRODES

## 2% THORIATED (RED) EWTh-2/WT20

Principal Oxide: 1.7-2.2% Thorium Oxide

Radioactive. Best for use in Direct Current (D/C) applications using transformer based constant current power sources. Best for use on non corroding steels, titanium alloys, nickel alloys, copper alloys. Good D/C arc starts and stability, medium erosion rate, medium amperage range, medium tendency to spit.

## 0.8% ZIRCONIATED (WHITE) EWZr-8/WZ8

Principal Oxide: 0.7-0.9% Zirconium Oxide

Non-Radioactive. Best for use in Alternating Current (A/C) for aluminum alloys and magnesium alloys using inverter or transformer based constant current power sources. Balls well, handles higher amperage than pure tungsten with less pitting, better arc starts and arc stability than pure tungsten.

## 1.5% LANTHANATED (GOLD) EWLa-1.5/WL15

Principal Oxide: 1.3-1.7% Lanthanum Oxide

Non-Radioactive. Best for use in Direct Current (D/C) as an alternative to 2% Thoriated using inverter or transformer based constant current power sources. Best for non corroding steels, titanium alloys, nickel alloys, copper alloys. Best D/C arc starts and stability, low erosion rate, wide amperage range, no spitting.

## 2% CERIATED (GRAY) FORMERLY ORANGE EWCe-2/WC20

Principal Oxide: 1.8-2.2% Cerium Oxide

Non-Radioactive. Best for use in Alternating Current (A/C) or Direct Current (D/C) applications using inverter or transformer based constant current power sources. Good for low-alloyed steels, non corroding steels, aluminum alloys, magnesium alloys, titanium alloys, nickel alloys, copper alloys. Good ignition and re-ignition properties, long service life, excellent arc stability. Low erosion rate, best at low amperage range, no spitting, good D/C arc starts and stability.

## PURE (GREEN) EWP/WP

Principal Oxide: None

NON-RADIOACTIVE. Good for use in Alternating Current (A/C) for aluminum alloys and magnesium alloys in low to medium amperage applications using transformer based constant current power sources only. Balls easy, tends to spit at higher amperages. Used for non-critical welds only.

## 2% LANTHANATED (BLUE) EWLa-2/WL20

Principal Oxide: 1.8-2.2% Lanthanum Oxide

Non-Radioactive. Best general purpose electrode for both Alternating Current (A/C) or Direct Current (D/C) using inverter or transformer based constant current power sources. Good for low-alloyed steels, non corroding steels, aluminum alloys, magnesium alloys, titanium alloys, nickel alloys, copper alloys. Good arc starts and stability, medium to high amperage range, low erosion rate.

## LaYZr™ (CHARTREUSE) EWG

Principal Oxides: 1.5% Lanthanum, 0.8% Yttrium Oxides, 0.8% Zirconium

Non-Radioactive. Best for automated or robotic applications in Alternating Current (A/C) or Direct Current (D/C) due to low voltage tolerance (changes in tip to work piece distance) using inverter or transformer based constant current power sources. Good for low-alloyed steels, non corroding steels, aluminum alloys, magnesium alloys, titanium alloys, nickel alloys, copper alloys. Very stable tip geometry, runs cooler than 2% Thoriated with longer life, low to medium amperage range. Very best low amperage starts.

Oxides used are primarily zirconium, thorium, lanthanum or cerium. Additions are usually 1% – 4%. These oxides greatly improve arc initiation, especially when direct current (DC) welding is employed. Thorium oxide (thoria) has been used for many years, having been found effective in terms of long life and thermal efficiency. Zirconium oxide (zirconia) has been commonly used for alternating (AC) TIG welding, normally for welding aluminum.
